

Graphics SW Architect - 632530

Description

The candidate will take the lead Windows Graphic SW Architecture position for Intel's Mobile and Communications Group's handheld platforms. Primary responsibility is to drive Windows SW architectural requirements for our 2015 and beyond platform. As a critical member of the technical team, he/she will work with other lead graphic architects/designers from other key organizations, including Intel's graphic, software, and client platform groups. The candidate is expected to work in a fast paced, team environment with strong leadership and communication skills. Broad and in depth knowledge of 3D graphics including current trends, Windows DirectX including DirectCompute, driver architecture, graphic performance, and architectural analysis is required, including an understanding of software impact on power efficiency.

Qualifications

We are seeking a candidate with strong understanding of the Windows Operating System, C++, WebGL, HTML5, Android, OpenGL, OpenGL ES, OpenCL, and Renderscript. History of successful technology or product launches. Ten years of experience in graphic software architecture with a master or PhD of science in computer engineering, or equivalent.

Business Group

Employees in the Intel Architecture Group (IAG) deliver innovative platforms across computing and communication segments including data centers, mobile and desktop personal computers, handhelds, embedded devices and consumer electronics. Intel's industry leading technology is used to create integrated hardware and software solutions such as processors, chipsets, communication radios, graphics processors, motherboards, and networking components that deliver capabilities from security and manageability to computing performance and energy efficiency. IAG employees are at the forefront of enabling a new era of computing that is more integrated into all aspects of our daily lives.
